

Conner Gardner

Junior Associate

Conner Gardner is a project engineer at Longman Lindsey. He joined the team full time after graduation, having been an intern for two years prior. Conner has a breadth of project experience in New York City that belies his years. He is passionate about providing clients with seamless yet effective acoustical treatments that fit into the overall design of the project.

While completing his undergraduate degree at the University of Hartford, he participated in two capstone projects researching acoustical characteristics of percussion instruments. His involvement within these projects both strengthened his skill of being a creative problem solver as well as taught valuable lessons on the communication of acoustical information. Beyond acoustics, Conner is trained in classical trumpet and enjoys performing music across many genres and on several different instruments.

Education:

University of Hartford
BSE Acoustical
Engineering and Music

Affiliations:
